

Novapoint Railway

Novapoint Railway takes you through the entirety of your design project, from the initial stages, through all of the relevant steps and onto the construction phase. Combining the powerful geometry and modelling tools with the knowledge of the railway designers, it makes Novapoint Railway a highly efficient and user-friendly design concept. This is a professional tool for high and normal speed railway lines, metro, light rail and also tramway design. Discover the advantage of combining and sharing data between civil engineering fields, such as having crossing roads, bridges, stations and parking areas in the same model, combined with noise calculation and visualisation of the entire project.

More information is available at the [Novapoint web site](#)
